

Take Control of Diabetes with the A1CNow® Self Check System

According to a 2017 study¹, roughly 60 percent of patients with diabetes struggle to sustain glycemic control over a three-year period. This puts them at greater risk for developing severe complications, like neuropathy, blindness, cardiovascular disease, and stroke.

4 Tests for More Timely Treatment

The American Diabetes Association (ADA) recommends that patients who struggle to control their blood glucose levels have their A1C tested four times per year.²

This allows patients to consult with their healthcare provider more frequently about their glycemic control without the need for quarterly office visits. It allows for potential timely treatment changes that could help lower their risk for diabetes-related complications.

That's why the A1CNow Self Check system is now available with four tests per box.

With the A1CNow Self Check 4-count box, people with diabetes can...

- Administer their quarterly A1C tests at home
- Save time traveling back and forth from in-office visits and lab appointments
- Save money on the cost per test

Healthcare providers may be able to³...

- Routinely assess a patient's glycemic control without the need to schedule multiple office visits and lab appointments
- Decrease time spent with paperwork, and increase time spent with patients
- Improve patient satisfaction and health outcomes

Lab Quality A1C Results at Home

Obtain accurate A1C results at home with the A1CNow® Self Check system.

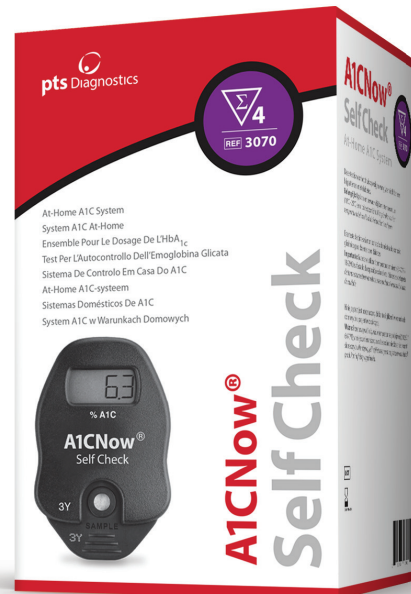

Perfect for Home Use

- Results in 5 minutes
- Fingerstick blood sample
- No maintenance
- Room temperature storage
- Small, compact, and battery-powered
- Affordable and easy-to-use

The A1CNow Self Check system is now available in a convenient 4-test package

The package includes...

- 1 patented A1CNow analyzer
- 4 test cartridges
- 4 fingerstick lancets
- 4 blood collectors

The A1CNow Self Check system
REF 3070 - NGSP
REF 3071 - IFCC
REF 3072 - NGSP

Results You Can Trust

NGSP-certified
IFCC-traceable
CE-marked for self-test use
